

Add Two Numbers

You are given two **non-empty** linked lists representing two non-negative integers. The digits are stored in **reverse order**, and each of their nodes contains a single digit. Add the two numbers and return the sum as a linked list.

You may assume the two numbers do not contain any leading zero, except the number 0 itself.

Example 1:

Input: $l1 = [2,4,3]$, $l2 = [5,6,4]$

Output: $[7,0,8]$

Explanation: $342 + 465 = 807$.

Example 2:

Input: $l1 = [0]$, $l2 = [0]$

Output: $[0]$

Example 3:

Input: `l1 = [9,9,9,9,9,9,9]`, `l2 = [9,9,9,9]`

Output: `[8,9,9,9,0,0,0,1]`

Constraints:

- The number of nodes in each linked list is in the range `[1, 100]`.
- `0 <= Node.val <= 9`
- It is guaranteed that the list represents a number that does not have leading zeros.
